Outstanding SF ala the Powers and Ship series'. Von Ein Kunde Ms. McCaffrey has once again delighted us with outstanding Science Fiction in the vein of her earlier "Powers that Be" and "Ship" series. The entire adventure utilizes good plot and character schemes without over-awing the reader with scientific jargon and explanations. Even in a genre so overpopulated with titles, Anne McCaffrey has even managed to add a few new twists to the plot. This new novel will surely become the pilot of a new series and I look forward to the next installment. The stage is set, Earth has been enslaved and, as a show of force, the populations of several large cities have been captured and carted off to be slave labor to the masters, the Catteni. One captured Terran is bent on escape but got a bit more than she bargained for in gaining her freedom. "Dropped" on a hostile planet with (over time) several thousand other Terrans and a variety of alien races the group must band together and struggle for survival, they think. The exiles quickly learn that the planet provides for them well, but they also learn that the entire planet looks like someone's garden. Survival now depends on avoiding the "gardeners" (both organic and mechanical) left behind by the previous owners, and learning just who would set up an entire planet to be a self-maintaining food factory?0 von 0 Kunden fanden die folgende Rezension hilfreich. I enjoyed Anne McCaffrey's, Freedom's Landing, it was very... Von Ein Kunde Anne McCaffrey's, Freedom's Landing was a very hard book to put down. I would recommend this novel to anyone who is interested in a thrilling, mind boggling, exciting, novel with a little spicy romance. Kris Bjorsen was just a normal, average college girl in a normal average college. Or so that's what she thought. Up until the day that she and thousands of others were "abducted" by mysterious, smelly, Catteni spaceships. On the planet Barevi, they were basically used as slaves. Then one day or shall I say night, Kris stole a Catteni spaceship and flew out into the jungle. She stayed out there for 5 weeks before encountering a Catteni that is wanted dead for killing another Catteni. She decides it's worth the risk of helping this Catteni. She does and then ends up clobbering him and knocking him unconscious. He wanted to repay her for saving his life, which he ends up doing later in the story. Well now she's got a body that she has to lug back to the city and drop. In the mist of doing so she gets caught and soon finds herself in a holding cell full of others. After she awakes she is given a shower, new clothes and drugged soup. She is then shoved onto a spaceship. What will happen next, I'm not going to tell, you're just going to have to find out the rest for yourself.0 von 0 Kunden fanden die folgende Rezension hilfreich. Once it got me interested, it was a great read. Von Ein Kunde Plots are interesting things. They can kill a good book or make a bad book ok (case in point, The Mandelorian Armor, good plot, bad writing), and this book's plot makes it unique. Said plot is about a woman who is abducted by aliens, and then deposited on a planet that the Catteni (abductors) want to have colonized. The aliens keep dropping more and more humans until they manage to get the planet under control, then they come back and take over again. The humans are given only short knives, ration bars, and some med kits to help them. About 1-2 hundred are dropped at one site, with many sites all over the planet. One of the guys dropped is an ex military fellow who organizes people, gets them to all do one thing instead of one person trying to get all of the knives, or food, or whatever. Once this is accomplished, and everybody who isn't dead is awake, they start out for some rocks, someplace that would be safer than where they are. After a whole day of marching they arrive at their destination and find some caves that they use to set up a sort of apartment for everyone to be in. While all this is rather interesting, it gets a little slow when they are marching along, and I began to wonder when they will get to something that will be interesting. Some of the characters at this point are rather annoying, and I find it difficult to not just skim over that part. It does take them a while to actually start doing things that are interesting, like exploring, making their cave convenient, establishing who else is on the planet and things of that nature. While it does take close to half the book to really draw me in, I was pleasantly surprised until the end, where it pretty much just cut off and ended. It was rather annoying. However, I can't wait to read the sequel. Maybe it will get interesting earlier than the middle of the book.

Kurzbeschreibung When the Catteni ships descended on earth it was one of the most terrifying experiences humankind had ever known. Kris Bjorsen, along with thousands of others, found herself herded by forcewhips into the hold of giant spaceships to be transported to the slave compounds of an alien planet. And even then it wasn't over. For, after a partially successful escape attempt, Kris was once more shipped across space - to an apparently empty and untamed planet. The Catteni just dumped an assorted load of humans and aliens on the strange world and left them to see what would happen. Brilliantly the refugees began to organize themselves into a pattern of survival. The planet was eerie and not as empty as it seemed. For someone - something - had built giant storage barns - the planet was being used as a huge larder - for an entity they could not comprehend. As Kris and her patrol set out to explore the enigmatic world she had yet another problem to contend with - the presence of Zainal, the high-ranking patrician Catteni who had been abandoned with the rest of them. Zainal was strong, brilliant, and... kind, and Kris was puzzled by his presence, his personality, and above all by the tenuous tie she felt towards this man - who was not a man but one of the hated Catteni. From Booklist With this book, McCaffrey opens an exciting and totally convincing new universe far removed from the worlds of the dragonriders, the Rowan, the crystal singer, and the ship-brawn partnerships with which her readers are happily familiar. The Catteni, an alien race of slavers, are settling a habitable but dangerous planet with

recalcitrant slaves from a variety of races, including the human; all must learn to cooperate with one another to survive. Among the conscripted colonists is an exiled Catteni noble, Zainal, who is resented by some other colonists because he is a member of the overlord race, and Kristin Bjornsen, a spirited young human who finds herself not only working closely with Zainal but drawn to him romantically. What with the "mechos" that already farm the planet's land, the advanced society that must have created them, the Catteni themselves, and the formidable race that apparently controls the Catteni as just some of the challenges facing the colonists, there can only be more action in the sequels McCaffrey presumably plans. Sally Estes From Library Journal When the Catteni conquerers of Earth discover a potentially habitable new planet, a group of human slaves, accompanied by an exiled Catteni lord, become involuntary colonists forced to live or die by their own resources. McCaffrey's latest novel inaugurates a new series set in a universe where humans are pawns in a war between galactic powers. With her customary talent for imaginative storytelling, the author skillfully portrays the environmental and personal challenges faced by the new colonists. Most libraries should consider this a priority purchase. Copyright 1995 Reed Business Information, Inc.
